

Deer ticks can transmit multiple diseases with a single bite

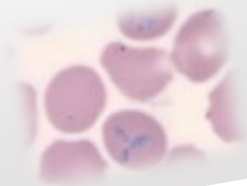

You may not see the bite or remember being bitten. Or you could have been bitten in a place that's hard to see, like your scalp. So:

Know the symptoms – Check with your doctor – Early detection is key!

Babesiosis

Signs in 1-8 weeks

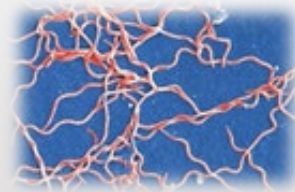

May include: fever, chills, headache, achy joints and muscles, fatigue, nausea, vomiting, abdominal pain

Lyme Disease

Signs in 3-30+ days

May include: expanding rash, flu-like symptoms, swollen glands

Anaplasmosis

Signs in 7-14 days

May include: fever, chills, headache, muscle aches, fatigue, nausea, vomiting, abdominal pain
