# Executive Summary

In May 2013, Act 10 of 2013 established the Community-Based Health Care Program within the Pennsylvania Department of Health (Department). The program is administered by the Bureau of Health Planning, Division of Health Professions Development.

The goals of the Community-Based Health Care Program are:

- ❖ to expand and improve health care access and services in underserved communities;
- ❖ to reduce unnecessary utilization of hospital emergency services; and
- ❖ to encourage collaborative relationships among community-based health care clinics, hospitals and other health care providers.

Grant funding is awarded in the following five categories:

- ❖ **Grant Category 1** - The development of a new community-based health care clinic
- ❖ **Grant Category 2** - The expansion of primary health services at an existing community-based health care clinic
- ❖ **Grant Category 3** - The addition or expansion of prenatal, obstetric, postpartum and newborn care services at an existing community-based health care clinic
- ❖ **Grant Category 4** - The development of alternate health care delivery systems at existing community-based health care clinics to improve services and access to reduce hospital emergency room utilization
- ❖ **Grant Category 5** - The implementation of collaborative relationships to enhance transitions of care for patients to ensure timely follow-up care for health care clinic patients seen in or admitted to the hospital and to develop referral mechanisms to establish a health clinic medical home for patients seen in the hospital and specialty clinics

## Methods

Through an annual request for applications (RFA) process, the Department solicits program applications from community-based health care centers located in or serving underserved communities to provide comprehensive primary health care services. For the purposes of the program, comprehensive primary health care services include basic primary and preventive health services related to the following specialties furnished by physicians and, where appropriate, physician assistants, nurse practitioners and nurse midwives who work in family medicine, internal medicine, pediatrics, obstetrics and gynecology. Services could include prenatal and perinatal services; cancer screening; well-child services; immunizations against vaccine-preventable diseases; screenings for elevated blood levels, communicable diseases and cholesterol; eye, ear and dental screenings; preventive dental services; family planning services; and referrals to other providers of medical services (including medical specialists and mental and substance abuse providers). In addition to the services provided by physicians, physician assistants, nurse practitioners and nurse midwives, the following services are also included as comprehensive primary health services: general dental services; behavioral and mental health services; pharmaceutical services; patient case management services; services that enable individuals to use health clinic services (such as transportation services and language interpreter services); patient health education services; and chronic care and disease management services. Comprehensive primary health care services do not include medical specialty services (such as, but not limited to, hospice, rehabilitation, oncology, rheumatology, endocrinology, gastroenterology and cardiology) or dental specialty services (such as, but not limited to, orthodontics, endodontics, periodontics or other dental specialty services).

The overall goal of the funding is to expand and improve community-based health care access and services. Funding through this program is for initial implementation or service expansion that would be sustained by the grantee beyond the grant period. Funding cannot be used to sustain existing operations. All grants awarded require a matching commitment of 25 percent in the form of cash or in-kind services to support the project.

Applicants to the program must meet the following eligibility criteria:

- a) All applicants must be a community-based health care clinic located in Pennsylvania that provides (or proposes to provide if applying to establish a new community-based health care clinic) comprehensive primary health services to all patients without regard for the patient's ability to pay.
- b) All applicants must be one of the following:
  - i. Federally qualified health center (FQHC) or FQHC Look-Alike
  - ii. Certified rural health clinic (RHC)
  - iii. Hospital health clinic: A clinic owned and operated by a hospital or health system that provides outpatient comprehensive primary health services
  - iv. Free health clinic (that provides services through volunteer and non-volunteer health care providers): A clinic that provides primary health services and does not accept reimbursement for health care services from any third-party payer, which would include reimbursement under any insurance policies or health benefits plans, including federal or state health benefits programs. The clinic does not

- charge patients for services provided based on the ability to pay or otherwise. The clinic may accept voluntary donations for the provision of services.
- v. Nurse managed health care clinic: A clinic that provides primary health services and is managed by a certified clinical nurse specialist, certified registered nurse anesthetist, certified registered nurse practitioner or a certified nurse midwife
- c) All applications must document that the proposed project site location where services will be delivered either:
- i. Is located within an area that has a current federal designation as defined by the U.S. Health Resources and Services Administration as a primary care (PC) health professional shortage area (HPSA); a medically underserved area/population (MUA/P) designation; a federally qualified health center (FQHC)/ FQHC Look-Alike or certified rural health clinic (RHC) with a “facility PC HPSA designation”; or
  - ii. Served a minimum of 30 percent low-income patients at the location for a pre-defined 12-month period. Low-income patients include patients in the following categories: Medicaid patients, discounted/sliding fee scale patients and no pay patients.

All eligible applications are reviewed and scored by evaluation committees comprised of industry executives and Department personnel. Scores are based upon established evaluation criteria used for all applicants:

- ❖ Demonstration of understanding and intent of the RFA
- ❖ Soundness of approach
- ❖ Feasibility
- ❖ Budget and budget justification

Following review, final scores are determined for each applicant, and applications are ranked in order from highest to lowest scores.

### **Award Methodology**

Grant awards are made based on the amount of available funding and the methodology defined by Act 10 of 2013 (Act), which allows funding discretion where there are insufficient or unqualified grant applications received in a category. The Act specifies the following distribution:

- ❖ Not more than 50 percent of available funding may be awarded for expansion of existing community-based health care clinics and the development of new community-based health care clinics.
- ❖ Not more than 25 percent of available funding may be awarded for improvements in prenatal, obstetric, postpartum and newborn care.
- ❖ Not more than 20 percent of available funding may be awarded for improved access to care and reduction of utilization of hospital emergency room services.
- ❖ Not more than 5 percent of available funding may be awarded for the establishment of collaborative relationships among community-based health care clinics, hospitals and other health care providers.

## Program History

RFA 67-26 was issued July 29, 2013, with applications due Sept. 4, 2013, for grants in the 2013-2014 and 2014-2015 state fiscal years. The amount of grant funding per category is outlined below:

- ❖ **Grant Category 1** - Up to \$500,000 award over two years
- ❖ **Grant Category 2** - Up to \$200,000 award over two years
- ❖ **Grant Category 3** - Up to \$200,000 award over two years
- ❖ **Grant Category 4** - Up to \$200,000 award over two years
- ❖ **Grant Category 5** - Up to \$50,000 award over two years

Using the methodology of the Act, 40 grants were funded with the following breakdown by category:

**Table 1: RFA 67-26 Award Summary**

<b>Category</b>	<b>Number of Applications</b>	<b>Number of Awards</b>	<b>Funding Amount by Category</b>
Category 1	7	5	\$2,478,305.00
Category 2	31	20	\$3,335,884.11
Category 3	8	5	\$937,395.90
Category 4	16	6	\$1,003,110.32
Category 5	4	4	\$151,012.44
<b>Total</b>	<b>66</b>	<b>40</b>	<b>\$7,905,707.77</b>

Table 1 shows total funding of \$7,905,707.77 for RFA 67-26 was awarded over the 18-month period of Jan. 1, 2014, through June 30, 2015. Appendix 1, pages 10 through 15, provides the names of grantees, county location, organization type, award amount per fiscal year, total award amount, use of grant funding and the reported number of new patients.

RFA 67-28 was issued March 3, 2014, with applications due April 2, 2014, for grants in the 2014-2015 and 2015-2016 state fiscal years. The amount of grant funding per category is outlined below:

- ❖ **Grant Category 1** - Up to \$500,000 award over two years
- ❖ **Grant Category 2** - Up to \$200,000 award over two years
- ❖ **Grant Category 3** - Up to \$200,000 award over two years
- ❖ **Grant Category 4** - Up to \$200,000 award over two years
- ❖ **Grant Category 5** - Up to \$50,000 award over two years

Using the methodology of the Act, 17 grants were funded with the following breakdown by category:

**Table 2: RFA 67-28 Award Summary**

<b>Category</b>	<b>Number of Applications</b>	<b>Number of Awards</b>	<b>Funding Amount by Category</b>
Category 1	7	2	\$1,000,000.00
Category 2	27	7	\$1,124,604.38
Category 3	7	4	\$782,385.47
Category 4	11	3	\$561,165.00
Category 5	3	1	\$50,000.00
<b>Total</b>	<b>55</b>	<b>17</b>	<b>\$3,518,155.45</b>

Table 2 shows total funding of \$3,518,155.45 for RFA 67-28 was awarded over the two-year period of Oct. 1, 2014, through June 30, 2016. Appendix 2, pages 16 through 18, provides the names of grantees, county location, organization type, award amount per fiscal year, total award amount, use of grant funding and reported number of new patients.

RFA 67-34 was issued March 12, 2015, with applications due April 10, 2015, for grants in the 2015-2016 and 2016-2017 state fiscal years. The amount of grant funding per category for this RFA was increased as outlined below:

- ❖ **Grant Category 1** - Up to \$600,000 award over two years
- ❖ **Grant Category 2** - Up to \$300,000 award over two years
- ❖ **Grant Category 3** - Up to \$300,000 award over two years
- ❖ **Grant Category 4** - Up to \$300,000 award over two years
- ❖ **Grant Category 5** - Up to \$100,000 award over two years

Using the methodology of the Act, 26 grants were funded with the following breakdown by category:

**Table 3: RFA 67-34 Award Summary**

<b>Category</b>	<b>Number of Applications</b>	<b>Number of Awards</b>	<b>Funding Amount by Category</b>
Category 1	5	4	\$2,256,042.30
Category 2	20	15	\$3,603,025.97
Category 3	2	1	\$300,000.00
Category 4	12	5	\$1,498,968.83
Category 5	3	1	\$100,000.00
<b>Total</b>	<b>42</b>	<b>26</b>	<b>\$7,758,037.10</b>

Table 3 shows total funding of \$7,758,037.10 for RFA 67-34 was awarded over the 21 months of Oct. 1, 2015, through June 30, 2017. Appendix 3, pages 19 through 24, provides the names of grantees, county location, organization type, award amount per fiscal year, total award amount, use of grant funding and reported number of new patients.

# Findings

## Impact and Benefits Assessment

Since the inception of the program, the Department has released three RFAs and has awarded a total of 83 grants. The program bases performance on the grantee's ability to increase access to care in terms of acquiring new patients and increasing capacity to provide services in the targeted underserved population.

RFA 67-26 grantees reported a cumulative total of 53,076 new patients, with a total award of \$7.9M, whereas RFA 67-28 grantees reported a cumulative total of 97,611 new patients, with a total award of \$3.5M. Also, there were 40 grant awards for RFA 67-26 vs. 17 grant awards for RFA 67-28. RFA 67-34 grantees reported a total of 55,655 new patients over a 21-month period, with a total award of \$7.7M.

Grants awarded in the first group had an 18-month grant period, and the grants for the second and third group had 21-month grant periods. In addition, the awards among the five categories vary depending on the number of applications received in each category and the number of awards made based on applicant evaluation scores.

Performance cannot be assessed comparing the five categories to each other, as each category is awarded for significantly different criteria.

Historically, there have been few applications for Categories 3 (prenatal, obstetric, postpartum and newborn care) and 5 (collaborative relationships to enhance transitions of care following hospital admissions).

New patient data showed a variance based on the type of organization. Among the five organizational types, most applications are from FQHCs, hospital health clinics, and free clinics. Very few rural health clinics or nurse-managed clinics apply for funding. Grantees' available resources to sustain projects beyond the grant period may be the cause for differences in new patient data among different types of organizations.

## Challenges and Recommendations

Throughout the grant period, grantees were required to report quarterly on challenges and problems encountered during the implementation of the grant project.

### **Availability of qualified medical personnel:**

The challenge reported most often by grantees was the inability to hire and retain medical personnel to provide services of the proposed project. In some cases, there were not enough qualified medical personnel available for hire. Other grantees could not retain personnel to work the expanded clinic hours of nights and weekends.

**Recommendation:** The Department's Bureau of Health Planning, Division of Health Professions, has multiple programs in place to address medical shortage areas in the commonwealth, including primary care loan repayment; J-1 visa waiver; assistance to

organizations applying for certification by the National Health Service Corps; programs for the development of the pipeline of individuals interested in health care careers; support for a career center linking health care professionals to openings in areas of need; support for expanded physician residency positions in a number of residency programs; and analysis of areas to recommend as health professional shortage areas or medically underserved areas by the federal Health Resources and Services Administration. It is recommended that funding for these programs continues.

**Inability to fully utilize funding:**

Grantees' inability to fully utilize funding has resulted in program dollars being returned to the general fund each fiscal year. In addition, funding inconsistencies have affected the program. The budget impasse of state fiscal year 2015-16 resulted in a loss of grantee productivity. Grantees may not have the resources to manage the upfront operational costs while waiting for reimbursement from the Department for the proposed project expenses. For the 2016-17 fiscal year, program funding was reduced by \$1M which resulted in a 16.7 percent funding reduction to all 38 grants.

**Recommendation:** The Bureau of Health Planning is investigating options to award grants to organizations most likely to use grant funding. One possible method is to assess past performance of each grantee and reduce funding in remaining grant years, distributing those funds to other organization more likely to use them. Another possibility is to prohibit some organizations from applying for future grant awards if past performance warrants such action.

Another recommendation is to provide a consistent funding stream to the extent possible. This consistency would likely assist grantees in the planning of staff additions, expansion of services and full use of each grant award.
