Cooperating Federal, State, and county agencies are conducting an oral raccoon rabies baiting project in western Pennsylvania. A vaccine packet is coated in fishmeal or vanilla which is very tasty to raccoons. The baits are dropped from low-flying airplanes or helicopters, or by local teams on foot or in vehicles. The vaccine can NOT cause rabies. This year’s operation will run **July 25th thru August 31st, 2022.**

**What if I find rabies baits?**
- Baits should be left alone – but intact baits can be moved if they are found where children and pets play. Damaged baits should be bagged and disposed in the trash.
  - Wear gloves or use a plastic bag when picking up the baits.
  - Toss intact baits into a fencerow, woodlot, ditch, or other raccoon habitat areas.
  - Wash your hands after any skin contact with a bait.

**What if my pet eats a bait?**
- A few baits are not harmful, although eating a lot may cause vomiting or diarrhea.
- Do not risk getting bitten by taking a bait away from your pet.
- Confine your pet for a couple of days and check the area for more baits.
- If your pet eats a bait, avoid your pet’s saliva for 24 hours, and wash skin or wounds that may have been licked.
