

BACKGROUND

Montgomery County, Pennsylvania is an urban county with a population of 826,075 people (401,978 males and 424,097 females). In 2017, Montgomery County had 110 suicide deaths (85 males and 25 females) at a rate of 12.6 suicide deaths per 100,000 people. The Pennsylvania Violent Death Reporting System (PAVDRS) worked closely with the Montgomery County Coroner’s Office and Montgomery County law enforcement to gather detailed information about each violent death. Below are some results of that collaboration.

In Montgomery County, approximately 2 suicide deaths occurred every week.

Characteristics of Suicide Victims

Sex of Victims:

- Data showed that males were over 3 times more likely to die by suicide than females.
- Montgomery residents, ages 30-39, were 1½ times more likely to die by suicide compared to Pennsylvania residents, ages 30-39.
- Overall, suicide death rates in Montgomery County were slightly lower than the state average:

Montgomery Rates: 12.6 deaths per 100,000 population (males 20.2 and females 5.4).

Pennsylvania Rates: 13.8 deaths per 100,000 population (males 21.4 and females 6.6).

The PAVDRS program is a state level surveillance system funded and overseen by the Centers for Disease Control and Prevention (CDC). It is part of the larger National Violent Death Reporting System (NVDRS). There is a Violent Death Reporting System in all 50 states and some US territories. The PAVDRS program collects data on suicides, homicides, deaths of undetermined intent, and accidental firearm deaths. The program is required to collect data directly from death certificates, coroners/medical examiners, and law enforcement. These sources contribute to a comprehensive understanding of each violent death. The program tries to understand what was happening in the victim’s life leading up to their death. PAVDRS/NVDRS data is used for research, policymaking, and, ultimately, to develop violence prevention programs and strategies that will enhance community safety.
