

# The Safe Traveler Bulletin

Health information to guide Pennsylvania travelers on how to prevent illness for themselves and communities while traveling.

## Prevention and Treatment for Respiratory Viruses This Winter

### RSV (Respiratory Syncytial Virus)

is easily spread when a person with the virus coughs or sneezes. [Symptoms](#) include a runny nose, cough, and fever. Most people have mild illnesses and recover without medical care, but in severe cases, pneumonia can occur. Since there is no specific medicine for the treatment of RSV, prevention and vaccination are the key. The CDC recommends vaccination for:

- [pregnant women](#) (to protect newborns)
- [babies and toddlers](#)
- [adults ages 60 and older](#)

**Influenza (the flu)** spreads similarly to RSV. Its [symptoms](#) include fever, body aches, coughing, and feeling very tired. The best way to prevent the flu is to get the flu shot every year. Most cases are mild and no medical care is needed, but antiviral medications are available to help you feel better, able to travel, and can be prescribed by your doctor. [Common antiviral drugs](#) used to treat the flu include *Tamiflu*, *Relenza*, and *Rapivab*. These drugs work best when taken within the first 48 hours of being sick. Keep in mind that antibiotics are not effective in treating the flu.

**COVID-19** is a global concern, especially for travelers. The virus is very easily spread through respiratory droplets and being in close contact with people sick with COVID-19. If you get sick or test positive immediately [stay away from others](#) and do not travel. If you have [symptoms](#) (which can range from mild to severe) including fever, cough, and shortness of breath get tested and seek medical advice. Treatments include *Paxlovid*, an antiviral medication for mild to moderate COVID-19 for those 12 and older and *Lagevrio*, for adults at high risk. The best way to prevent severe COVID-19 is by getting vaccinated.

RSV, influenza, and severe COVID-19 infection levels are posted weekly to PA's Respiratory Virus Dashboard.
