## P R O C E E D I N G S

-----  
CHAIR: Good morning.

Welcome to another virtual Board meeting for this crew. I'd like to call this meeting to order.

This is the Medical Marijuana Advisory Board Meeting being held at 10:00 a.m. on November 16th, 2021. Before we officially get started today, I want to take a brief moment to introduce a new Board member that's with us today, Dr. Geith Shahoud.

Dr. Shahoud was recently appointed by the majority leader at the Senate. He provides child and adult psychiatric services to Western PA and local areas.

Before I move on to roll call, because it's his first Board meeting, I wanted to ask if he would like to take a moment to introduce himself.

Dr. Shahoud.

DR. SHAHOUD: Yes. Thank you very much. I appreciate it.

CHAIR: Welcome.

DR. SHAHOUD: My name is Geith Shahoud and I'm an adult psychiatrist. I do practice

1 psychiatry since 2004, when I graduated from  
2 Mississippi. And then I did a fellowship in child  
3 psychiatry also in Columbia, Missouri.

4 Then I moved to Pennsylvania in 2007  
5 and I have been working in Pennsylvania since then  
6 in the Pittsburgh area.

7 The two main jobs I handle now is I'm  
8 Director of Child Psychiatric Hospital in  
9 Pittsburgh, Pennsylvania. They call it Southwood  
10 Psychiatric Hospital, where we see children and  
11 teenagers. And also I am the Medical Director of  
12 the Intermediate Unit 1 for three counties in the  
13 area, where we see children. Plus I have my  
14 outpatient.

15 So thank you for the opportunity and I  
16 thank you again.

17 CHAIR: Of course. Welcome.

18 And I apologize for not pronouncing  
19 your name correctly at first, but we are grateful to  
20 have you here and thank you for doing the brief  
21 introduction as well.

22 So now we will be able to officially  
23 move on to roll call. And so I think I will just  
24 start off. Alison Beam here.

25 Colonel Evanchick?

1                   COLONEL EVANCHICK: I'm here.

2                   CHAIR: Good morning.

3                   Janet Getzy Hart?

4                   DR. GETZY HART: Present.

5                   CHAIR: And as mentioned at the top of

6 the call, I believe Kalonji Johnson is not able to

7 make this one because of a conflict.

8                   Dr. Johnson?

9                   DR. DENISE JOHNSON: Here.

10                  CHAIR: Good morning.

11                  David Steffen?

12                  MR. STEFFEN: Here.

13                  CHAIR: John Adams?

14                  ATTORNEY ADAMS: Here.

15                  CHAIR: Dr. Shahoud:

16                  DR. SHAHOUD: Here. Sorry.

17                  CHAIR: Oh, of course.

18                  Bhavini Patel?

19                  MS. PATEL: Here.

20                  CHAIR: Molly Robertson?

21                  MS. ROBERTSON: Here.

22                  CHAIR: Dr. Kambic?

23                  DR. KAMBIC: Here.

24                  CHAIR: Dr. Goldfarb?

25                  DR. GOLDFARB: Here.

1           CHAIR:   Shalawn James?

2           MS. JAMES:   Here.

3           CHAIR:   And Luke Shultz?

4           MR. SHULTZ:   I'm here.

5           CHAIR:   I wanted to ask legal counsel  
6 to the Board, Katelyn, to confirm do we have a  
7 quorum today Katelyn?

8           ATTORNEY MALTAIS:   Good morning,  
9 Secretary.   Yes, we have a quorum.

10          CHAIR:   Great.

11                So folks should be able to see on the  
12 shared screen, the agenda for today is listed.   So  
13 next up is the approval of the minutes for the  
14 meeting held August 17, 2021.

15                I understand that you all have been  
16 provided the minutes from the last Board meeting  
17 which was held on August 17, 2021, which I hope you  
18 all had a chance to review.

19                Upon review of the meeting minutes, we  
20 noticed that pertaining to the Medical Marijuana  
21 Program update and comments made by John Collins, it  
22 was recorded in the minutes that the update and  
23 comments were attributed to John Adams.

24                With that being clarified, would I be  
25 able to get a motion to approve the meeting minutes

1 from the August 17, 2021 Board Meeting?

2 DR. GETZY HART: I'll make a motion.

3 CHAIR: Thank you Janet.

4 DR. GETZY HART: No problem.

5 CHAIR: Would I be able to get a  
6 second?

7 MS. JAMES: Second.

8 CHAIR: Katelyn I might ask for help  
9 there. I heard multiple folks chime in on the  
10 second.

11 Is there one voice that you heard that  
12 you want to note?

13 ATTORNEY MALTAIS: I particularly saw  
14 Shalawn pop up on my screen.

15 So we'll attribute the second to  
16 Shalawn.

17 CHAIR: Great. Thank you so much.

18 All in favor of this motion to approve  
19 the minutes, please say aye.

20 AYES RESPOND

21 CHAIR: Is anyone opposed?

22 Are there any abstentions?

23 Okay. The meeting minutes from the  
24 August 17th Board meeting are approved.

25 At this time I will turn things over

1 to John Collins, Director of the Medical Marijuana  
2 Program for an update.

3 MR. COLLINS: Thank you, Secretary.

4 Good morning, Board. We're going to  
5 step through a number of items this morning.

6 Joining me in this update from the Office of Medical  
7 Marijuana is our Assistant Director and Chief  
8 Compliance Officer Sunny Podolak.

9 It's worth noting that today we cross  
10 the rather significant milestone for the program.  
11 The program to date we are now reporting \$4 billion,  
12 that's \$4 billion in total sales.

13 The agenda is laid out in front of  
14 you. A couple of key points before I begin. Act 44  
15 implementation contained 33 initiatives that we are  
16 currently implementing. And one of those key  
17 initiatives important to patients is the Medical  
18 Marijuana Assistance Program, which Sunny will  
19 provide a lot of clarity on.

20 The next three agenda items focus on  
21 volume, the mix of product purchased, and basically  
22 at what price, as we continue to monitor that  
23 carefully to be sure that we have continued  
24 affordable access.

25 Next slide, please.

1           These are the program metrics to date.  
2   681,000 patients and caregivers have registered.  
3   The more dynamic numbers, the second point 384,254  
4   active patient certifications. These represent  
5   those patients that have in their possession a  
6   authorization and an active ID card to be able to  
7   enter dispensaries. About half of those do each  
8   week and purchase about 2.5 products and visit our  
9   dispensaries at least twice a month.

10           The average purchase continues to be  
11   around \$130 to \$135, although it's continuing to  
12   trend down. And I'll cover that a little bit later  
13   on. A very positive sign.

14           16.5 million patient dispensing events  
15   has occurred, which is noteworthy in terms of  
16   keeping patients safe and using a track-and-trace  
17   program through our electronic means, as required  
18   under the statute. 47,000,000 products have been  
19   dispensed. And as I've already mentioned across the  
20   \$4 billion total sales mark, that's program to date,  
21   and that's made up of the values you see below.

22           \$1.6 billion are sales from grower  
23   processors to dispensaries, and \$2.4 million, the  
24   higher value represent those purchases made by  
25   patients attributed to the 16.5 million visits and

1 the 47,000,000 products dispensed.

2 Next slide, please.

3 Next we'll look at the Act 44  
4 implementation. This was signed into law by the  
5 Governor on June 30th of this calendar year. And as  
6 I mentioned in the openings, it has more than -  
7 well, almost three dozen - actually 33 key  
8 initiatives that we're going to go into in some  
9 detail now.

10 I'm pleased to report that as of this  
11 morning, 25 or roughly 75 percent of the total have  
12 been successfully implemented. We're going to  
13 focus, though, I'm going to use this as the  
14 opportunity, Sunny, to hand this off to you, to talk  
15 a little bit more about those implementation  
16 projects in process, some of which are rather  
17 noteworthy, one of them being the Medical Marijuana  
18 Assistance Program.

19 Sunny.

20 MS. PODOLAK: Thank you John.

21 Can you got back to the previous  
22 slide, please?

23 Thank you.

24 So you'll notice the column that is  
25 talking about the implementation in progress. And

1 there you'll see there are two items in that column  
2 which represent major projects or new programs.

3           The first program is the Medical  
4 Marijuana Assistance Program or MMAP, M-M-A-P, which  
5 I will discuss in more detail shortly.

6           The second program is the Enterprise  
7 Resource Planning or ERP application programming  
8 interface with our seed-to-sale tracking system.

9           Moving to the next row, you'll see  
10 that there are grower processor and labs that have  
11 four items in the implementation and progress  
12 column. One of those is enhancing our seed-to-sale  
13 system to include stability testing results with our  
14 approved laboratories.

15           One includes creating medical  
16 marijuana products in topical form by utilizing  
17 remediated medical marijuana. One is obtaining and  
18 processing harvested hemp from a person holding a  
19 permit from the Department of Agriculture.

20           And finally, the introduction of a  
21 30-day window to allow grower processors to obtain  
22 and transport seed and immature plant material from  
23 outside this Commonwealth.

24           I'm happy to announce that this will  
25 be implemented shortly. The first 30-day window

1 will open December 1st through December 30th.  
2 Moving forward, this 30-day window will open  
3 annually on December 1st.

4                   And in addition, grower processors  
5 will be able to request additional 30-day windows to  
6 obtain and transport seed and immature plant  
7 material from outside this Commonwealth throughout  
8 the year.

9                   The implementation of these items  
10 requires enhancements to this seed-to-sale system  
11 and the office has been working very closely with  
12 them on the details on how these will work.

13                   Once these items become available, the  
14 office will communicate that to the partners who  
15 will be impacted.

16                   Moving down, you'll see that  
17 background checks has one item in the implementation  
18 in progress column. Currently fingerprinting  
19 results are received by the office in hard copy.  
20 And once this is implemented, the office will  
21 receive these results electronically, thus improving  
22 efficiency with the caregiver approval process as  
23 well as the affiliation process for Pennsylvania's  
24 permittees.

25                   And then finally we'll move to

1 permitting, where there is still one item in our  
2 implementation-in-progress column. And you will  
3 note that the office has made applications available  
4 for one clinical registrant permit. Those  
5 applications are currently open. And once we award  
6 a clinical registrant permit, we will be able to  
7 move this out of implementation progress and into  
8 the implemented column.

9                   Next slide, please.

10                   I would now like to update you on the  
11 implementation of the Medical Marijuana Assistance  
12 Program or MMAP.

13                   With the passage of Act 16, the Office  
14 of Medical Marijuana was tasked with establishing  
15 programs that will assist the cost of providing  
16 medical marijuana to patients who demonstrate  
17 financial hardship or need, assist patients and  
18 caregivers with the cost associated with the waiver  
19 or reduction in fees for the identification card,  
20 and provide for the cost of background checks for  
21 caregivers.

22                   The office has been providing  
23 assistance since 2017 to participants in two ways.  
24 Patients and caregivers who are registered in an  
25 existing Commonwealth Financial-Hardship Program are

1 provided a 50-percent discount on their annual  
2 identification card fee. And 65 percent of  
3 background check fees for caregivers is currently  
4 covered.

5                   With the passage of Act 44 in June,  
6 the expansion of the Medical Marijuana Assistance  
7 Program is underway. I'm excited to share that the  
8 Medical Marijuana Assistance Program is expanding by  
9 eliminating the annual identification card fee for  
10 eligible participants, eliminating all federal  
11 background check fees for eligible caregivers, and  
12 assisting eligible patients with the purchase of  
13 medical marijuana from Pennsylvania dispensaries.

14                   To expedite - excuse me, expedite the  
15 availability of assistance, we are rolling out the  
16 expansion of the MMAP in three phases.

17                   Next slide, please.

18                   Phase one will eliminate annual  
19 identification card fees for eligible participants  
20 registered in an existing Commonwealth Financial-  
21 Hardship Program.

22                   You'll notice that the current price  
23 of an annual medical marijuana ID card is \$50.  
24 Moving over, the reduced fee is \$25 for those  
25 eligible participants who are registered in an

1 existing Commonwealth Financial-Hardship Program.

2 And moving over to the next column.

3 When phase one is implemented, the annual medical  
4 marijuana ID card fee will be eliminated. We expect  
5 this to be implemented during the first quarter of  
6 calendar year 2022.

7 Next slide, please.

8 The next row will talk about phase  
9 two.

10 Phase two eliminates all background  
11 check fees for eligible caregivers. The full price  
12 for obtaining fingerprints for the required  
13 background checks for caregivers is \$20.85.  
14 Currently, caregivers pay a discounted rate of  
15 \$7.60.

16 And moving over, when phase two is  
17 implemented, the fee for eligible caregivers to  
18 obtain fingerprints for the required background  
19 check will be eliminated.

20 The implementation timeline for phase  
21 two is to be determined, but we will continue to  
22 communicate this once it is made available.

23 Next slide, please.

24 And finally, phase three will  
25 distribute assistance in a to-be-determined amount

1 to eligible patients to use to purchase medical  
2 marijuana products at dispensaries.

3           Again, the amount of assistance has  
4 not yet been determined. And the implementation  
5 timeline for phase three is to be determined. But  
6 again, we will communicate this once it is made  
7 available.

8           So to review, the implementation of  
9 the Medical Marijuana Assistance Program will  
10 eliminate the annual identification card fee for  
11 eligible participants, eliminate all federal  
12 background check fees for eligible caregivers, and  
13 assist eligible patients with the purchase of  
14 medical marijuana from Pennsylvania dispensaries.

15           There will be an FAQ document posted  
16 to the website this afternoon on the Medical  
17 Marijuana Assistance Program. And as a reminder,  
18 our website is [www.medicalmarijuana.pa.gov](http://www.medicalmarijuana.pa.gov).

19           I'll turn things back to John now.

20           Thank you.

21           MR. COLLINS: Thank you, Sunny. I  
22 appreciate that.

23           Understandably this is a lot of  
24 information. Thank you for calling out that a FAQ  
25 document will be posted before close of business

1 today, and also for clearly illustrating that the  
2 Medical Marijuana Assistance Program, MMAP,  
3 continues to address savings that were implemented  
4 several years ago.

5 Overall, the program does capture  
6 assistance as it pertains to ID cards, background  
7 checks, and some assistance provided regarding the  
8 purchase of product for qualified patients. More  
9 details to follow.

10 Next slide, please. Next, we're going  
11 to take a look at one of the key items pertaining to  
12 what and how are patients interacting with our  
13 dispensaries.

14 Next slide. This is an ongoing  
15 graphic and illustration pointing to the continued  
16 growth and total dispensary sales. For those  
17 looking at this maybe for the first time, the green  
18 bars represent monthly total sales and are  
19 illustrated on the left-hand side of the page.  
20 Meaning for the month of October sales were in  
21 excess of \$120,000,000 for that month alone.

22 The blue line is legend on the right-  
23 hand side. And it's showing and ever-increasing  
24 growth of the program since its inception and  
25 represents program to date numbers that I called out

1 previously of 2. - I think it was 2.4 million for  
2 total sales for dispensaries to patients.

3                   One of the things I want to call out  
4 before we move on here is, there is a bit of a  
5 concern, Secretary and the Board, with the long-term  
6 viability of supply. Weekly sales continue to  
7 outpace sales by grower processors at about a  
8 20-percent rate. So we keep our eyes and ears open  
9 looking for stock-outs as the number of dispensaries  
10 continue to grow, and we appreciate the heavy  
11 lifting done by our permittees. They have expanded  
12 aggressively and I know continue to do so. But  
13 there is that long-term view that basically says  
14 we're going to need more growing space here in the  
15 program.

16                   Next slide. This is the mix of  
17 product. What products are going to authorize  
18 patients at the point of sale, meaning dispense to  
19 those. And what you're seeing is the continued  
20 prevalence of dry leaf followed by vaporization  
21 products as being those leading items relatively  
22 unchanged, a little bit up and down as you look  
23 back, but relatively unchanged. Said a different  
24 way, vaporization products account for in excess of  
25 80 percent of total products, as you're seeing here.

1                   So we remain steadfast, Secretary and  
2 the Board, in monitoring additives and being sure  
3 that what is approved and authorized by FDA as  
4 approved excipients, meaning additives to products,  
5 is safe for patients. And we continue to monitor  
6 that very, very carefully.

7                   Next slide, please. Next, I want to  
8 take a look at pricing trends at the permittee  
9 level. So we'll begin with dry leaf sales.

10                   Next slide, please. What you're  
11 looking at, because dry leaf is, one, the highest  
12 volume item that we have, and two, likely the most  
13 competitive, meaning pricing changes dramatically or  
14 it becomes a point-of-sale reference for those that  
15 are purchasing product with their choice of where  
16 they go to buy those particular items, you need to  
17 see that dry leaf sales continue to be a substantial  
18 part.

19                   As you saw on the last slide, nearly  
20 45 percent of the total volume here. On the lower  
21 right-hand corner, those represent 138 was the  
22 number of operational dispensaries closing out  
23 October, but I'm pleased to report that since then  
24 in the last couple of weeks we've added two more,  
25 actually. So we're now at 140.

1                   Next, let's take a look at, you know,  
2 what is the pricing trend and what's happening at  
3 the point of sale.

4                   Next slide, please. What you're  
5 seeing here is a slope of a line. We're going to  
6 take a look at actual price points in just one  
7 moment. But this becomes very important when  
8 comparing it to the - next slide, please.

9                   This slide indicates that pricing at  
10 the wholesale level is falling much faster than  
11 pricing at the retail level. And there's a reason  
12 for that, which I'll go over in just a moment. We  
13 have seen so far pricing savings being passed along  
14 to patients. Or said a different way, price  
15 reductions at the wholesale level, meaning by  
16 growing processors to dispensaries, represented as  
17 lower price points at some future point in time at  
18 the dispensaries and we're carefully monitoring  
19 that. Let's take a little bit of a deeper dive  
20 here, though.

21                   Next slide, please. These are those  
22 trend lines. And you can see that the sloping line  
23 for wholesale pricing continues to trend downward.  
24 It is driven by - data point that I will go over in  
25 just a moment. But because of that, we would

1 anticipate more recent savings are passed along to  
2 patients relatively soon.

3 ---

4 (WHEREUPON, AN INTERRUPTION IN THE PROCEEDINGS WAS  
5 HELD.)

6 (WHEREUPON, AN OFF RECORD DISCUSSION WAS HELD.)

7 ---

8 MR. COLLINS: Just to restate, what  
9 these trend lines show, and they're very important  
10 metrics, is they show the relative direction for  
11 both discounts at the point of sale, which is what  
12 our patients pay, and the acquisition costs incurred  
13 by our dispensaries.

14 So in a competitive market, we would  
15 expect those price savings at some point to flow  
16 through the system. One other thing I want to point  
17 out before we move forward is that what I'm going to  
18 show you next does not, I repeat does not include  
19 additional point-of-sale discounts.

20 Let's go to the next slide, please.  
21 What you're looking at is representative of what  
22 people pay. Our patients don't pay percents, they  
23 pay dollars. Right? That goes without saying, but  
24 it's worth pointing out, because what we're tracking  
25 here is something called average purchase or average

1 selling price, often referred to as ASPs. And I'll  
2 get into more detail about the significance and its  
3 lack of significance for our patients. But it is an  
4 important trend to monitor if you're monitoring it  
5 the same way each time, because you can track  
6 trends.

7           So what you're seeing here on the  
8 wholesale price per gram for dry leaf is you're  
9 seeing 18 - I'm sorry, \$8.17 when compared to the  
10 \$10.19 back from January of 2020 is almost a  
11 20-percent reduction. You're not seeing that yet  
12 when you take a look at \$14.05 compared to \$15.67.  
13 But because the \$8.17 is very current, we anticipate  
14 and will monitor because we believe our patients  
15 expect those savings to be passed along to them in  
16 terms of what they are paying.

17           Before we move forward, I want to lay  
18 some groundwork here. We're going to look at very  
19 granular information as to what really is going on  
20 at the point of sale. When we call out an average  
21 selling price for an ASP, in this instance \$14.05,  
22 it's often asked, Secretary and the Board, who pays  
23 that. Well, that's not what that's about.

24           Let's go to who pays what on the next  
25 slide, please. We're going to take a look at a

1 series of slides broken out into three geographic  
2 regions, East, Central, West. Each one of those  
3 geographic regions contains two medical marijuana  
4 regions. In this case, you're looking at the  
5 Eastern region and that is southeast and northeast.

6           What you're looking at is an  
7 explanation from our prior point. If you see the  
8 average selling price at the last Board meeting when  
9 this analysis was actually started, we had the  
10 \$14.27 number, but what you're looking at is  
11 diversity of pricing at the point of sale.

12           So if you take a look at harvest in  
13 Scranton, you'll see a price point down to what  
14 appears to be \$8.50 per gram up to nearly \$20. And  
15 that is represented and replicated in other lines  
16 that you're looking at. What that represents is the  
17 variability of price based on the type of strain,  
18 what the patient might believe or the dispensary  
19 might position as a particular rich terpene profile  
20 or cultivar mix. It can be the volume, meaning a  
21 one-gram purchase might be priced a tad higher than  
22 someone that's buying a larger amount. Or said a  
23 different way, someone that's buying a 90-day supply  
24 versus a 30-day supply.

25           And these types of pricing trends are

1 very consistent in the pharma space. They are  
2 representative of an open-market model. They are  
3 evidence of a competitive process going on.

4 All right. So what you're looking at  
5 and what we're going to hit in the next two slides  
6 is what makes up 14 - what makes up the average  
7 selling price of \$14.27. And what you're looking at  
8 is the variability. Meaning it's unlikely that  
9 anybody's paying that. That's a point of measure  
10 for ourselves.

11 So Secretary and the Board, as a  
12 matter of clarity, this is very complex and we do  
13 monitor it. These data, by the way, for those that  
14 might be interested, actually were pulled from the  
15 respective menus for each of these dispensary or  
16 permittees. Okay. This came right off the menu.

17 And as well I had mentioned earlier in  
18 my presentation, these do not account for additional  
19 discounts to veterans, seniors and other qualifying  
20 individuals that can run from 5 percent to 15 or 20  
21 percent on top of what you're seeing there. Okay.

22 So let's take a look at the next  
23 slide. This is the Eastern region. These are the  
24 two regions. This is now the Central region. And  
25 you'll see the same kind of diversity. You'll see a

1 difference attributed to what is going on from a  
2 competitive perspective, what strains, what brands  
3 are being carried, what the quantity is that's being  
4 purchased. But again, these are advertised  
5 point-of-sale menu-driven analyses that anybody can  
6 do.

7           And it's worth pointing out - let's go  
8 to the next slide that represents the Western area.  
9 You'll see the same type of diversity in these  
10 markets.

11           So in conclusion here, in taking a  
12 look at these trends, Secretary and the Board, we  
13 continue to see broad-based evidence of a  
14 competitive market.

15           The two things that we monitor and  
16 closely wish to manage, and I know there's a  
17 subcommittee of the Board that is also very  
18 interested in this, which is reasonableness, meaning  
19 is there a reason, and then the affordability piece.  
20 Which is, you know, is it excessive regardless of  
21 the variability?

22           So two important metrics. We're  
23 focused on the former, which is, is what you're  
24 seeing, in my opinion, evidence of a competitive  
25 market? Yes. Is there evidence of appropriateness

1 based on competition and volume? That's exactly  
2 what I'm seeing here.

3 So with that, I'll stop, Secretary.  
4 Hand you back the floor and see if there are any  
5 questions not covered here. Thank you.

6 CHAIR: Thanks, John.

7 Does anyone have questions for John  
8 regarding the information that he just presented?

9 MR. SHULTZ: This is Luke. I actually  
10 have some questions for Sunny.

11 CHAIR: All right. Go ahead.

12 MR. SHULTZ: Okay.

13 First of all, Sunny, thanks for the  
14 update, especially in regards to the Assistance  
15 Program. That's welcome news to the patient  
16 community. And I appreciate your hard work in  
17 getting that implemented.

18 You had mentioned about an application  
19 process for one clinical registrant be coming  
20 online.

21 Could you please restate that? I'm  
22 not sure if I got it correctly.

23 MS. PODOLAK: Of course. As you know,  
24 Act 44 allowed for two additional Academic Clinical  
25 Research Centers. We did approve one Academic

1 Clinical Research Center, and that means that one  
2 clinical registrant permit is now made available.  
3 Applications were posted on October 14th and  
4 applications are due to be postmarked no later than  
5 this Thursday, November 18th.

6 MR. SHULTZ: Okay.

7 And is there an effort to get the  
8 second permit awarded?

9 MS. PODOLAK: An additional Academic  
10 Clinical Research Center will need to be approved  
11 and that approval is still open.

12 MR. SHULTZ: Okay. That answers my  
13 question.

14 CHAIR: Anything else, Luke?

15 MR. SHULTZ: No, that's it. Thank  
16 you.

17 CHAIR: Any other questions? All  
18 right.

19 So John, we can progress through the  
20 agenda, if that works for you.

21 MR. COLLINS: Yes. Let's please go to  
22 the next slide.

23 CHAIR: Great. So the next agenda  
24 item is old business. There was an outstanding  
25 request to change subcommittee Chairs. And after

1 serious consideration, based on the expansive nature  
2 of Act 44 and the authorities and the responsibilities  
3 that it gives this Board, at this time I have decided  
4 to keep the current subcommittee Chairs intact.

5                   This would mean that the Regulatory  
6 Subcommittee will continue to be chaired by Janet  
7 Getzy Hart. The Medical Review Subcommittee will be  
8 chaired by Dr. Denise Johnson. The Medical Research  
9 Subcommittee will be chaired by Bhavini Patel. The  
10 Patient and Caregiver Subcommittee will be chaired by  
11 Molly Robertson. And the Report Subcommittee will be  
12 chaired by Luke Shultz.

13                   With that being said, I wanted to  
14 remind everyone that even though you're assigned to a  
15 specific subcommittee, you are able to request and  
16 participate in other subcommittees that may be of  
17 interest to you. And you can do that by reaching out  
18 to Holli.

19                   Next, we're going to now on to new  
20 business. And the first item is to review the  
21 qualifying medical conditions for the medical  
22 marijuana usage applications. As you are aware, the  
23 Board voted to adopt a process for changing, reducing  
24 or adding serious medical conditions. As a result,  
25 today we have one application for review.

1 I just wanted to take this opportunity  
2 to remind everyone of what happens when an application  
3 is rejected or approved. An approved application  
4 comes to me, as Secretary, for consideration.  
5 Rejected applications do not. However, a requester  
6 has the ability to request reconsideration by the  
7 Chair, myself, in writing, providing the reasons for a  
8 requested reconsideration.

9 Per our published process, upon a  
10 grant of reconsideration, the requester will be able  
11 to present their case directly to the Board. A  
12 preconsideration by the Chair is denied after granting  
13 reconsideration, the request is rejected, then the  
14 requester's request will be deemed denied for one year  
15 or until new scientific evidence is available.

16 At this time I will turn things over  
17 to Dr. Denise Johnson, Chair of the Medical  
18 Subcommittee to lead the discussion on the  
19 application.

20 Dr. Johnson?

21 DR. DENISE JOHNSON: Great. Thank you  
22 very much, Secretary Beam.

23 Good morning, Board members. As  
24 Secretary Beam mentioned, we have one application for  
25 review today. Board members were sent the application

1 electronically last week to prepare for today's  
2 meeting. I would like to present the feedback from  
3 our committee and the application for your review.

4                   So the next task for the Board is  
5 going to be to reject or approve the application SMC  
6 21-004 for chronic hepatitis. This is - this  
7 application requests to add chronic hepatitis as a  
8 qualifying serious medical condition for the Medical  
9 Marijuana Program. Our subcommittee discussed the  
10 application and some of the notes from our discussion  
11 include that the subcommittee had previously reviewed  
12 a similar application that was for hepatitis in  
13 general. At that time we felt that the case was made  
14 for chronic but not acute hepatitis. This application  
15 has been modified to include only chronic hepatitis.

16                   Also, we consider that 16 states  
17 already approved this serious medical condition. The  
18 articles that were presented with the application  
19 reference decreasing in cirrhosis and fatty liver and  
20 other conditions with the use of medical marijuana.  
21 And also suggested some mechanisms for decreasing  
22 inflammation. But there's a lot of other literature  
23 out there that confirms that there's a increase in  
24 nausea and vomiting and pain symptoms with cannabis  
25 use.

1                   Those were the main points of the  
2 discussion. I'll ask Dr. Kambic, Dr. Goldfarb or  
3 Molly if you have anything to add.

4                   DR. GOLDFARB: Nothing to add.

5                   DR. KAMBIC: Dr. Kambic. Nothing to  
6 add.

7                   MS. ROBERTSON: Molly, neither.

8                   DR. DENISE JOHNSON: Great. Thanks.

9                   So based on, again, our review of the  
10 application, pertinent literature, as well as the  
11 acceptance in other states, our committee would  
12 recommend accepting the application as proposed. And  
13 so I would like to make a motion to accept this  
14 application as proposed.

15                   MS. ROBERTSON: I would like to second  
16 that.

17                   CHAIR: Dr. Johnson, I'm happy to take  
18 over. I just want to make sure, Katelyn, should we  
19 have discussion on this motion?

20                   ATTORNEY MALTAIS: Yes, Secretary. At  
21 this time the motion can be open for discussion for  
22 the remainder of the Board members.

23                   CHAIR: Great. Is there further  
24 discussion on this motion? Seeing no more -.

25                   COURT REPORTER: Madam Chairman, -

1                   CHAIR: Oh, sorry.

2                   COURT REPORTER: - who made the  
3 second? Who made the second?

4                   CHAIR: I believe it was Molly.  
5 Is that right?

6                   MS. ROBERTSON: Correct.

7                   COURT REPORTER: Thank you.

8                   CHAIR: Seeing no more discussion,  
9 we'll take a vote on this motion. So as I call your  
10 name, you can either approve, reject or abstain the  
11 vote on the motion. Perfect. Sorry. I just wanted  
12 to make sure I got the process for this right.

13                   And so first, we'll go with myself.  
14 Approved.

15                   Colonel Evanchick?

16                   COLONEL EVANCHICK: Approve.

17                   CHAIR: Janet Getzy Hart?

18                   DR. GETZY HART: Approve.

19                   CHAIR: Dr. Johnson?

20                   DR. DENISE JOHNSON: Approve.

21                   CHAIR: David Steffen?

22                   MR. STEFFEN: Approve.

23                   CHAIR: John Adams?

24                   ATTORNEY ADAMS: Approve.

25                   CHAIR: Dr. Shahoud?

1                   DR. SHAHOUD: Abstain.

2                   CHAIR: Bhavini Patel?

3                   MS. PATEL: Approve.

4                   CHAIR: Molly?

5                   MS. ROBERTSON: Approve.

6                   CHAIR: Dr. Kambic?

7                   DR. KAMBIC: Approve.

8                   CHAIR: Dr. Goldfarb?

9                   DR. GOLDFARB: Approve.

10                  CHAIR: Shalawn James?

11                  MS. JAMES: Approve.

12                  CHAIR: And Luke Shultz?

13                  MR. SHULTZ: Approve.

14                  CHAIR: All right.

15                  Holli or Katelyn, check me on this. I

16 have 12 approved and 1 abstain.

17                  MS. SENIOR: I have 11 yeses and 1

18 abstain.

19                  Secretary, you - well, I'll let

20 Katelyn verify.

21                  ATTORNEY MALTAIS: Yes. Secretary

22 Beam, I have the same as Holli; 11 yeses, 1

23 abstention.

24                  CHAIR: Right. I'll take your math

25 over mine. Wonderful. All right.

1                   Katelyn, any more to do on that?

2                   ATTORNEY MALTAIS: No. With that, the  
3 application has been approved. And after today's  
4 Board meeting, it will come to your office for review.

5                   CHAIR: Excellent. Thank you so much.  
6 Wonderful.

7                   So on a related topic, as most of you  
8 are aware, a virtual conference was held on October  
9 20th to help educate Board members on our roles and  
10 our responsibilities, and to better understand the  
11 current processes and procedures that are currently in  
12 place.

13                   We also talked about having more  
14 virtual conferences to help further educate the Board  
15 on certain topics of interest. After consulting with  
16 legal Counsel to the Board, and in order to ensure  
17 compliance with the Sunshine Act, it was determined  
18 that if the education being presented may in some way  
19 assist in the development of a Board policy, then the  
20 education should be presented at a public meeting  
21 versus a virtual conference.

22                   I know that was different than where  
23 we had left it at the last virtual conference. So  
24 that was what informed our decision to not have  
25 another virtual conference prior to this Board

1 meeting. There were some items, though, that would  
2 possibly result in the need to addition - to develop  
3 additional processes and procedures for the Board to  
4 follow.

5                   And as folks who participated know,  
6 one of the items that came up past discussions  
7 pertains to the Board's approval of serious medical  
8 conditions, particularly limited to patient research  
9 conducted under Chapter 20. It was determined that it  
10 could be beneficial for the Board to have a better  
11 understanding on how medical marijuana research is  
12 currently being conducted in Pennsylvania under  
13 Chapter 20. It's also important for the Board to have  
14 this knowledge as they consider developing a policy.

15                   Consequently, I will turn things over  
16 to John Collins to talk about Chapter 20 medical  
17 marijuana research that's being conducted in  
18 Pennsylvania.

19                   John?

20                   MR. COLLINS: Yes. Thank you,  
21 Secretary.

22                   What you're looking at here are two of  
23 the three types of research that may be conducted  
24 under the statute. These two types, what's shown here  
25 in blue and in green, represent those pertaining to

1 patient-based studies. The one not shown here is  
2 called a research initiative. It's described as a  
3 nonpatient research study type, often referred to  
4 additionally an in vitro, meaning outside the body not  
5 pertaining to a patient study. So I'm going to focus  
6 on those two things, Secretary and the Board, that  
7 pertain to where a patient, a human study subject  
8 might be involved.

9                   A further explanation, on the  
10 left-hand side, there are five key segments. I'm  
11 going to focus on four of those, number two, three,  
12 four and five. The middle column is labeled current  
13 in blue. It's called a research program and that is  
14 the extent to which research under Chapter 20 may  
15 currently be initiated and conducted and managed. It  
16 is done through our very experienced Academic Clinical  
17 Research Centers. We currently have nine. And they  
18 are world-renowned and experts, as I mentioned, in  
19 conducting patient-based research.

20                   What's also important is all research  
21 done at these nine ACRCs must be reviewed and approved  
22 by an oversight group, which I'll go into in just a  
23 moment, often referred to as an IRB, or Institutional  
24 Review Board, which is an FDA-defined term.

25                   So now we're going to walk through the

1 current. A point of contrast before we get into the  
2 detail is on the right-hand side, the research project  
3 or study actually requires medical cannabis or  
4 cannabis in general to be rescheduled by the federal  
5 government. So we're showing these here because the  
6 regulations were drafted to account for at some future  
7 point rescheduling or e-scheduling of cannabis. But  
8 today, all of our ACRCs that are conducting active  
9 research of patients are focused on what you're  
10 looking at on the current column.

11 Just wanted to add some additional  
12 clarity there, Secretary, because we're covering a  
13 lot.

14 In terms of - I'll begin with item  
15 two. In terms of the conditions that can be studied,  
16 only those that are approved. Meaning, should someone  
17 want to conduct a study, as an example, on sleep  
18 apnea, that is not currently an approved serious  
19 medical condition. Whereas if it's rescheduled, then  
20 any medical or psychological condition can be studied.

21 Looking, then, at item three. Also,  
22 there's a restriction here on the forms. So  
23 particular forms that are approved, pills, oils,  
24 topical forms, dry leaf or other plant form,  
25 appropriate forms for vaporization and nebulization,

1 those are the types that may be utilized while we're  
2 conducting research. Now, it's not restricted. It  
3 doesn't restrict the ability to do, for example,  
4 qualitative and quantitative studies, or attitudinal  
5 studies and double-blind placebo control studies. And  
6 what I just mentioned is currently going on with all  
7 of our active ACRCs.

8           One point of notation here. There is  
9 a clear distinction between what might be viewed as an  
10 open study, meaning an attitudinal study that's being  
11 done. And the implication there is that where they're  
12 dispensed and what they're dispensed isn't important.  
13 What's important is capturing the study subjects  
14 experiences and how that might be impacting whatever  
15 the study design is, whether it's quality of life, or  
16 reduction in other pain medications.

17           The opposite of that, if you will, is  
18 the quantitative study. Those are definitely  
19 highly-structured. They're restricted as to where  
20 patients can be dispensed and also the form in which  
21 they can be dispensed.

22           Naturally if we have a double-blind  
23 placebo controlled restricted study going on at a  
24 particular medical school, and they have a cohort or a  
25 study group of 50 patients, they're, of course,

1 wanting to make sure that they're being appropriately  
2 dispensed, managed by their research professionals and  
3 medical staff, and that they have assurity that what  
4 the patient has been provided is exactly matching  
5 study design.

6                   So I'm describing a lot of granularity  
7 here, Secretary and the Board, but I'm pointing out  
8 how sophisticated and systemized our processes and  
9 engagement with our medical participants or ACRCs are.

10       Okay.

11                   Looking at item four, who supervises  
12 the research? Currently, it includes what can be  
13 described as a Research Approval Committee or an IRB,  
14 depending upon the particular institution itself. I  
15 can share that I am aware that most are using their  
16 IRBs, which are very much aware of how to keep  
17 patients safe, and to approve any study in making sure  
18 that the patient is made well-aware that they are  
19 participating and actively engages in that decision to  
20 be part of a research initiative.

21                   Item five, how medical marijuana is  
22 dispensed, is also noteworthy here, because, one, it  
23 ties back to what I just outlined as a restricted  
24 study. That means it must be dispensed at particular  
25 clinical registrants' dispensaries or it's a more open

1 study and can be dispensed elsewhere. But the key  
2 here is that it must be provided through an approved  
3 dispensary permitted in the Commonwealth.

4                   And that is linked to our system. We  
5 can manage exactly at the direction of the medical  
6 school, manage how things are dispensed, who interacts  
7 with the patient, and whether or not what coding is  
8 used, what research initiative or initiatives they're  
9 signed up for, when they might expire, and when they  
10 might be in or out of a particular research  
11 initiative.

12                   I do want to call out - and a lot of  
13 our ACRCs have contributed to our design, but I do  
14 want to, Secretary, call out how involved Thomas  
15 Jefferson University has been over the last two years.  
16 Noteworthy is Dr. Brooke Worster, who heads up the  
17 research initiative there. And we really appreciate  
18 her and Thomas Jefferson's guidance on helping us  
19 design a system that all of the ACRCs are benefitting  
20 from.

21                   So with that said, I'll go ahead and  
22 pause and take whatever questions are needed to  
23 educate the group on how guided our medical research  
24 initiative is under Chapter 20. Thank you.

25                   MS. ROBERTSON: This is Molly. I have

1 a question.

2 MR. COLLINS: Sure, Molly.

3 MS. ROBERTSON: For number three, is  
4 there any room to allow any kind of research into -  
5 and I hesitate to use the word edibles, but different  
6 forms such as lozenges and things like that for the  
7 research program?

8 MR. COLLINS: Molly, I will answer  
9 that two ways.

10 One, if this pertains to how you might  
11 be contemplating further research initiatives under  
12 the empowerment granted under Act 44, I'm not going to  
13 be able to answer that question, because I can't  
14 provide guidance there. Okay? But the other part of  
15 the question I can answer. I don't know if it's the  
16 question you're asking me, though.

17 But if you're asking me, for example,  
18 can a troche type of buccal administration, which is  
19 applied to the inside of the gum or cheek, if you  
20 will, because it is not to be swallowed. It is to be  
21 administered that way. You know, if a study design  
22 requires that type of administration, then it would  
23 normally be submitted with the research initiative  
24 itself. Okay?

25 So I can't say that that would be

1 allowed, per se. But I can tell you that that's how I  
2 would expect to be able to review it, Molly, is it  
3 would have to be directly related to this particular -  
4 to any particular research initiative. To where that  
5 route of administration, using an approved form, which  
6 would be a pill, oil, topical form and how that  
7 particular applicant may consider a trocheal  
8 application or buccal application to represent a pill  
9 based on its needed route of administration and  
10 support of that research initiative.

11 Okay?

12 MS. ROBERTSON: Okay. Thank you.

13 MR. COLLINS: Yep. Secretary, hearing  
14 no other questions, I'm going to hand you back the  
15 floor. Thank you. Thank you, everyone.

16 CHAIR: Thanks, John. That's great.

17 So the next section of today's agenda  
18 actually deals with processes and procedures that the  
19 Board may wish to consider implementing based on past  
20 discussion as well as the expansive nature of Act 44  
21 and the authorities and the responsibilities that that  
22 Act gives the Board.

23 Act 44 gives the Board the authority  
24 to continue to present recommendations and findings  
25 through written reports that will be submitted to the

1 Secretary of Health. While originally Act 16 of 2016  
2 gave the Board the authority to issue a written report  
3 within two years, Act 44 of 2021 empowers the Board to  
4 issue written reports. This means that the Board can  
5 issue and adopt reports at any time and as often as  
6 they deem necessary.

7 We talked very briefly at the virtual  
8 conference about the likely need to create a reports  
9 policy. And I'm pleased to share that the Report  
10 Subcommittee, chaired by Luke Shultz, has prepared a  
11 proposed policy for discussion today.

12 So at this time, I will turn things  
13 over to Luke Shultz, Chair for the Reports  
14 Subcommittee to lead this discussion. Luke?

15 MR. SHULTZ: Okay. Thank you,  
16 Secretary. Holli, could I have the first slide? Oh,  
17 there it is.

18 You should have all received a copy of  
19 the proposed reports policy, so I won't read through  
20 all of it. But basically the background section  
21 indicated the need for the reports is basically, as  
22 the Secretary said, it came about because of Act 44,  
23 which requires the Advisory Board to produce written  
24 reports for the Governor, the Senate, and the House of  
25 Representatives to include recommendations and

1 findings on program changes. It also describes the  
2 action to be taken by the Department of Health and the  
3 Secretary.

4                   So what we see up on the slide is the  
5 beginning of the process part of the proposed policy,  
6 which is what we need to focus on and have any  
7 discussion on.

8                   So reading through this, the policy  
9 part, after each meeting where a recommendation is  
10 approved by the Advisory Board to change the Medical  
11 Marijuana Program, the Reports Subcommittee will  
12 produce a written report.

13                   Recommendations to change the Medical  
14 Marijuana Program include, one, whether to change the  
15 types of medical professionals who can issue  
16 certifications. Two, whether to change out or reduce  
17 the types of medical conditions which qualify serious  
18 medical conditions under the Act. Three, whether to  
19 change the form of medical marijuana permitted under  
20 this Act. And four, how to ensure affordable patient  
21 access to medical marijuana.

22                   The thought behind this section is  
23 that by generating a report after each meeting where a  
24 change to the program is recommended, it will keep the  
25 process moving as quickly as possible to allow for the

1 Secretary and the Department to make their decision on  
2 the recommendation and implementation of that  
3 recommendation for the program.

4           Go to the next slide. Then step two  
5 of the report policy. Reports shall include approved  
6 recommendations and related findings. The reports may  
7 also include findings on recommendations not approved  
8 or other issues, other Advisory Board activities, and  
9 general information and updates on the Medical  
10 Marijuana Program.

11           We would not have to generate an  
12 extensive multi - multipage document, but we could  
13 include a general update on where the program is at,  
14 and what, if any, other initiatives the Board is  
15 working on. I believe we could accomplish this in  
16 four or five pages, at most.

17           Then step three, reports will be  
18 presented by the Report Subcommittee to the Advisory  
19 Board for adoption at the next regularly-scheduled  
20 public meeting. That's self-explanatory.

21           And finally, four, adopted reports  
22 shall be provided to the Secretary of Health, the  
23 Governor, the Senate, and the House of  
24 Representatives, and will be public record under the  
25 Right-to-Know Law. Also self-explanatory.

1           That's the proposed reports policy as  
2 we've developed this draft. At this point if there's  
3 any questions or discussion, we can go from there.

4           CHAIR: Are there any discussions, any  
5 questions for Luke?

6           Luke, the one piece I wanted to just  
7 make sure that I was understanding, I think it's  
8 important to note that we may wish to consider  
9 developing a formal way for the Board subcommittees to  
10 submit recommendations for Board consideration. Is  
11 this something that we see fitting under this reports  
12 policy or is this a stand-alone policy?

13           MR. SHULTZ: I would see that being  
14 developed by the Regulatory Subcommittee. I believe  
15 that's who developed the bylaws for the Board. So I  
16 don't see it being part of this.

17           CHAIR: Others thoughts on the  
18 proposed reports process? Okay.

19           Katelyn, I want to make sure I'm clear  
20 with you on next steps on how to proceed.

21           What are your thoughts?

22           ATTORNEY MALTAIS: Sure. So hearing  
23 no feedback on the proposed reports policy, at this  
24 time, Secretary, you can go ahead and open the floor  
25 and see if anyone would like to make a motion to

1 approve the proposed reports policy.

2 CHAIR: Okay.

3 I am opening the floor to see if  
4 anyone would like to make a motion to the proposed  
5 reports policy.

6 ATTORNEY ADAMS: I'll make a motion.

7 MS. ROBERTSON: I'll second. This is  
8 Molly.

9 CHAIR: I believe that was John Adams  
10 and Molly as a second.

11 Is that correct, folks?

12 ATTORNEY ADAMS: That is correct.

13 MS. ROBERTSON: Yes.

14 CHAIR: Okay.

15 Katelyn, we should just move forward  
16 with a traditional vote, then, with everyone saying  
17 aye who is in agreement or do you want -?

18 ATTORNEY MALTAIS: Yes, we can.

19 CHAIR: Okay. Great.

20 All those in favor, please say aye.

21 AYES RESPOND

22 CHAIR: So anyone who objects, say  
23 nay. Anyone that abstains?

24 All right. Katelyn, I believe then we  
25 actually have adopted the proposed reports process as

1 presented by Luke.

2 ATTORNEY MALTAIS: Yes, Secretary.  
3 That's correct. We've officially adopted the proposed  
4 reports policy and we can put that in final form and  
5 provide that to the Board members after the Board  
6 meeting.

7 CHAIR: Great. Wonderful.

8 So the next item on the agenda under  
9 the category of processes and procedures, is serious  
10 medical conditions or SMCs. This is broken down into  
11 three separate sections, so that we can make sure that  
12 we address all of them.

13 The first one, which we touched on  
14 earlier, is approving SMCs for Chapter 20 research.  
15 It has been confirmed by legal Counsel that this is  
16 something that can occur under the Board's authority.  
17 And some preliminary discussions acknowledge the  
18 importance for the Board to establish a policy as to  
19 how this would be done.

20 As John mentioned earlier, we thought  
21 it was important for the Board to have a better  
22 understanding of how research is currently being  
23 conducted under Chapter 20 in order to help develop an  
24 effective policy. And I'm hoping that information  
25 that John covered proved to be helpful in this matter.

1                   We also talked about the ability for  
2 SMCs to be presented through the Board's  
3 recommendation process. This means that subcommittees  
4 could recommend that SMCs be changed, added or reduced  
5 through the Board's recommendation process.

6                   While we have touched on creating a  
7 policy around submitting recommendations by  
8 subcommittees, if SMCs being changed, added or reduced  
9 is part of the subcommittee's recommendation for  
10 consideration by the Board, should there be a unique  
11 process for which this must occur, or does it make  
12 sense to somehow incorporate the already existing SMC  
13 application process?

14                   Given that, I'd like to propose  
15 something, and then I would appreciate the group's  
16 feedback. To me, given that the Medical Review  
17 Subcommittee was instrumental in the development of  
18 the current SMC application process, or the public  
19 submittal process, it makes sense to have them take  
20 the lead on advising us on what may be needed in these  
21 instances.

22                   Does that seem reasonable to the group  
23 to ask that the Medical Review Subcommittee first  
24 determine if a policy is needed? And two, if so, what  
25 the policy should look like?

1 I will pause for feedback and any  
2 comments. And of course, want to particularly create  
3 space for those that are actually assigned to that  
4 Medical Review Subcommittee to get their feedback on  
5 this proposal.

6 DR. DENISE JOHNSON: Well, Dr. Johnson  
7 here, if others won't weigh in. I think it makes  
8 sense for consistency, so that we can have some  
9 consistency in terms of the process for approving  
10 these conditions. And I know this is something that  
11 our subcommittee has done in the past. And so we'd be  
12 happy to take this task on to review it and bring  
13 forward some recommendations for the Board members to  
14 consider.

15 I don't know if any of my other  
16 subcommittee members have any thoughts.

17 DR. KAMBIC: Yeah, Dan Kambic. I  
18 certainly agree with that synopsis.

19 CHAIR: Any others with thoughts or  
20 feedback? All right.

21 Given that we're not hearing any  
22 objections, I'd like to formally ask the Medical  
23 Review Subcommittee -. First, propose a policy for  
24 the Board to consider that would allow for the  
25 submission of SMCs limited to patient research and

1 conducted under Chapter 20.

2 And secondarily, determine if a  
3 separate policy should be developed for when  
4 subcommittees wish to recommend that a change be made  
5 to SMCs. If the answer to this is yes, please also  
6 draft a proposed policy to this process.

7 Additionally - oh, go ahead, Dr.  
8 Johnson.

9 DR. DENISE JOHNSON: No. Yes. Thank  
10 you, Secretary.

11 Our subcommittee would be happy to  
12 consider and draft for the Board members.

13 CHAIR: Thank you. Really  
14 appreciated.

15 On this topic, at our last Board  
16 meeting, we had discussions on the possible need to  
17 revise our current SMC application process. And at  
18 this time, I will turn things over to Physician  
19 General Dr. Denise Johnson who chairs the Medical  
20 Review Subcommittee to talk about this. Dr. Johnson.

21 DR. DENISE JOHNSON: Great. Thank you  
22 again, Secretary. For the Board members, our  
23 subcommittee was asked to review the process for  
24 modifying a condition for a serious medical -  
25 modifying a condition for consideration as a serious

1 medical condition. You all would have gotten a copy  
2 of that draft in your email in preparation for this  
3 meeting, but I'm just going to go over basically what  
4 our outline was.

5                   So in the past when we reviewed these  
6 applications, we reviewed them as presented and  
7 accepted or rejected them based on the application  
8 without modifications. As you heard before, Act 44  
9 allows us, as a Board, to make modifications. And so  
10 we proposed a change to the process that we were  
11 currently using.

12                   So for the changes, what we have  
13 recommended is that when an application is submitted,  
14 this committee will review it with the supporting data  
15 that's presented on the application, as we have in the  
16 past, and any other information that's at our  
17 disposal.

18                   Based on the review completed within  
19 our committee, we're going to provide the Board  
20 members with a recommendation to either, A, approve;  
21 B, reject; or C, consider modifications. And we also  
22 will note the rationale for our selection.

23                   This communication will occur to the  
24 Board members in advance of the Board meeting, so that  
25 the Board members might be better prepared to discuss

1 at the Board meeting. Then at the Board meeting,  
2 after deliberation, the Board members will then make  
3 the decision to either approve, reject or approve with  
4 modifications.

5 Dr. Goldfarb, Dr. Kambic, Molly, is  
6 there anything that I omitted?

7 DR. GOLDFARB: Not to my end, no,  
8 Goldfarb.

9 DR. KAMBIC: Kambic, I agree  
10 completely.

11 MS. ROBERTSON: This is Molly. I  
12 agree also.

13 DR. DENISE JOHNSON: Great. Thank  
14 you, Committee members.

15 And so that would be our proposed  
16 change. Again, making sure that the Board members are  
17 aware in advance of the Board meeting what our  
18 thoughts and our concerns were, so that you can be  
19 prepared to discuss at the meeting. The actual Board,  
20 then, would make the final decision, as you always  
21 have, on whether to accept or reject, but also in this  
22 case to make a modification before accepting.

23 Thank you, Secretary.

24 CHAIR: Katelyn, I'm going to defer to  
25 you again on whether or not we want to actually move

1 forward with adopting this process today.

2 ATTORNEY MALTAIS: Sure. So I think  
3 at this time, just like we did for Luke's proposed  
4 policy for reports, we should take a moment and see if  
5 there's any discussion or questions from Board  
6 members.

7 CHAIR: Okay.

8 Do any of the Board members have  
9 questions or have any topics for discussion?

10 MR. SHULTZ: This is Luke. I have one  
11 minor thing. It refers to the Medical Marijuana  
12 Advisory Board Subcommittee. Should it state the  
13 Medical Marijuana Advisory Board Medical Review  
14 Subcommittee to be more specific?

15 DR. DENISE JOHNSON: You're correct,  
16 Luke. Thanks for that clarification.

17 MR. SHULTZ: Okay.

18 CHAIR: Any further discussion? All  
19 right.

20 Katelyn, I think we should pursue the  
21 vote, if that works for you.

22 ATTORNEY MALTAIS: Yeah. Seeing that  
23 the only modification that's been pointed out is  
24 adding in the clarifying language regarding the  
25 Medical Review Subcommittee, we can go ahead and take

1 a vote to approve the application with the - policy,  
2 with the understanding that subcommittee will be  
3 updated to properly reflect the Medical Review  
4 Subcommittee.

5 CHAIR: Katelyn, you are so precise.  
6 That works. So all in favor of the motion to approve  
7 the policy, please say aye.

8 AYES RESPOND

9 CHAIR: Is anyone opposed? Are there  
10 any abstentions?

11 Okay. Policy is approved. Thank you,  
12 Dr. Johnson.

13 DR. DENISE JOHNSON: My pleasure.

14 CHAIR: We will continue on with the  
15 agenda. So something else that came up at the virtual  
16 conference was whether or not there was a way for the  
17 public to provide feedback directly to this Board.

18 While we continue to look into this  
19 and determine the best path forward, we're going to  
20 begin to address the need for the public to have  
21 access to the Board by modifying an existing process  
22 used by the Department. Right now there is a contact  
23 form that is available on the Department of Health  
24 website as a way for the public to ask specific  
25 questions or provide feedback. Individuals are able

1 to select the most appropriate category for their  
2 inquiry from the list that drops down. And we're  
3 going to be adding the Medical Marijuana Advisory  
4 Board as an option.

5 Additional details are still being  
6 worked out and we will get back to you with more  
7 information prior to implementation. But I did want  
8 to acknowledge that this item is being worked on  
9 currently.

10 Next, I wanted to hear from our  
11 subcommittee chairs. I know that you all had a call  
12 with program and legal Counsel to the Board after our  
13 last Board meeting regarding duties and expectations.  
14 And at this time I'd like each - I'd like to speak to  
15 each Chair and get feedback on your subcommittee  
16 activities and address any questions or concerns you  
17 may have. Today we're going to start with the Medical  
18 Research Review Subcommittee.

19 Bhavini Patel?

20 MS. PATEL: Hi. Yes. We don't have  
21 any updates. We haven't met since our last meeting  
22 prior to the January meeting. So no new updates on  
23 our part.

24 CHAIR: Thank you.

25 Next we have the Patient and Caregiver

1 Subcommittee.

2 Molly Robertson?

3 MS. ROBERTSON: So I'm going to defer  
4 to Luke, although a lot of our discussion was the  
5 patient affordability. So that was covered earlier.  
6 But Luke, go ahead.

7 MR. SHULTZ: Okay. Thank you, Molly.

8 We're still collecting information and  
9 data on initiatives for affordable access for the  
10 patient and caregiver communities. And we'll be ready  
11 to present our findings and suggestions at the next  
12 meeting.

13 However, I can report that there are  
14 two things that keep coming up time and again related  
15 to affordable access. One is the need for home  
16 cultivation of cannabis plants by patients and/or  
17 their caregivers. This came up in a patient survey  
18 that we conducted in early 2020 and it continues to be  
19 something that the patient community is in strong  
20 support of.

21 Allowing for home cultivation, which  
22 is part of many other state Medical Marijuana  
23 Programs, will significantly improve affordability for  
24 those patients who would choose to pursue that effort.  
25 And from what I understand, there is currently

1 bipartisan - a bipartisan effort in the PA Senate that  
2 is being formulated to address this issue. So I'm  
3 sure there'll be more information on that by the  
4 January meeting.

5                   The other thing that keeps coming up  
6 has already been addressed, and that is the Patient  
7 Assistance Program. We already had discussion on  
8 that.

9                   And that's about it for now. Thank  
10 you.

11                   CHAIR: Thank you, Luke. Thank you,  
12 Molly and thank you, Luke. Appreciate it.

13                   Now let's hear from the Regulatory  
14 Subcommittee.

15                   Janet Getzy Hart?

16                   DR. GETZY HART: Sure. Madam  
17 Secretary, we have not have the opportunity to meet  
18 either. We will meet prior to the January meeting and  
19 the agenda will be to look at the type of  
20 professionals in the dispensaries and now, I believe,  
21 an additional formal page for changes or putting some  
22 type of a form together for what was approved at this  
23 particular meeting. We can start working on that. I  
24 do believe that we're the right subcommittee to do  
25 that. And I think we are.

1           CHAIR: Great. I appreciate you  
2 volunteering. That's really, really helpful. And I  
3 think that would be extremely helpful. I, of course,  
4 defer to John and others in the program to make sure  
5 that I'm not off on that, but understood.

6           DR. GETZY HART: Thank you.

7           CHAIR: That transitions nicely for  
8 the Reports Subcommittee.

9           Luke, do you have an update?

10          MR. SHULTZ: Yeah, very briefly.  
11 Given that we approved the policy for reports and also  
12 at this meeting we approved the condition of chronic  
13 hepatitis, it looks like we have to have a report  
14 ready for the next meeting, which we will.

15          CHAIR: Thank you, Luke.

16          And lastly, the Medical Review  
17 Subcommittee, Mr. Johnson.

18          DR. DENISE JOHNSON: Thank you,  
19 Secretary.

20                   I believe that we gave all of our  
21 updates in the modification of our process. I don't  
22 think we have anything additional to add. Any of my  
23 subcommittee members can think of anything else we  
24 need to add?

25                   I think that's it, Secretary. Thank

1 you.

2 CHAIR: Okay. Thanks, Dr. Johnson.

3 So with that, we have officially  
4 covered all the items on today's agenda. At this  
5 time, I wanted to open it for more broad additional  
6 discussion.

7 Are there any other questions that you  
8 may have that haven't been answered today?

9 All right. Well, hearing no more  
10 discussion, we will conclude today's meeting. Our  
11 next Board meeting is scheduled for Thursday,  
12 January 27th, 2022 from 10:00 to noon. Thank you  
13 again for everyone's participation today. Look  
14 forward to continuing our work together.

15 May I have a motion to adjourn today's  
16 meeting?

17 DR. GETZY HART: Motion to adjourn.

18 CHAIR: Thanks, Janet.

19 Will I be able to get a second?

20 DR. DENISE JOHNSON: Second. It's Dr.  
21 Johnson.

22 CHAIR: Thanks, Dr. Johnson. This  
23 meeting is adjourned. Thank you all.

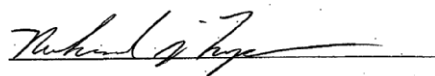

24 \* \* \* \* \*

25 MEETING CONCLUDED

## CERTIFICATE

1  
2 I hereby certify that the foregoing proceedings,  
3 hearing was held before Chair Beam, was reported by me  
4 on November 16, 2021 and that I, Richard J. Lipuma,  
5 read this transcript, and that I attest that this  
6 transcript is a true and accurate record of the  
7 proceeding.

8 Dated the 22 day of January, 2022
